ABSTRACT

This publication is a compilation of statistical data concerned with the quantitative aspects of the California public school system. It contains data on the number of pupils, teachers, and schools and the amount of money needed to educate the 4.4 million children who attend California public schools. Some information on community college finances is included. Statistical tables in this compilation deal with textbooks, instructional materials, school lunch programs, public school revenues, assessed valuation, bond elections, tax rates, average daily attendance and expenditures, and school districts. (Author/DS)

* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *

This publication was edited and prepared for photo-offset production by the Bureau of Publications, California State Department of Education, and published by the Department, 721 Capitol Mall, Sacramento, California 95814.

Printed by the Office of State Printing and distributed under the provisions of the Library Distribution Act

1976

Copies of this publication are available for 65 cents each, plus 6 percent sales tax for California residents, from Publications Sales, California State Department of Education, P.O. Box 271, Sacramento, CA 95802. A list of other publications that are available from the Department may be obtained by writing to the same address.

Additional information about Department publications may be found on page 133 of this publication.

Foreword

"There is just a breath of life existing in the apology for a school in the town," Oliver C. Coffin of Martinez reported to John G. Marvin, Superintendent of Public Instruction, on December 5, 1851. "I presume," Mr. Coffin continued in his report to the Superintendent, "it [the school] will be defunct ere one month passes away. If it be in your power to procure a first rate teacher, you would confer a great favor upon the residents about this region of country."

Mr. Coffin's report on the condition of the schools in Contra Costa County was very much like all the responses Superintendent Marvin received in the first attempt at collecting educational statistics for the state of California. Thus, the history of the document you now hold, *California Public Schools Selected Statistics*, had its beginning 125 years ago in Benicia, the California capital and the headquarters of the Superintendent at that time. Of course, the appearance of the statistical report has changed over the years, but the subject matter has remained very much the same. The first superintendent was ordered by law "to report annually on the condition of the public schools," and his report was to show essentially the same data you will find in our statistical report for the 1974-75 school year.

I must admit that as I look at the multitude of forms we have for collecting data in the 1970s, I am somewhat envious of the five simple, direct questions Superintendent Marvin used to collect his information in 1851:

1. What number of children and youth are there within the limits of (city) between the ages of 4 and 18 years?
2. How many schools have you?
3. How is such school supported?
4. What permanent provisions have you for the future support of schools?
5. Is the school sectarian in character, or supported by the aid of any particular denomination?

Those who collect data for statistical purposes may be interested in knowing that only one person, Sylvester Woodbridge, Jr., of Solano County, responded to all of Superintendent Marvin's questions in the order and manner in which they were asked.

Although Mr. Woodbridge's responses may have been more meaningful from a statistical standpoint, I must confess that I did not find them as interesting as the comments from the others who replied. For example, S. Barney of Santa Barbara County wrote, "There was formerly a school well attended in San Buenaventura, but it has been broken up." H. R. Haskins in Placer County reported, "There is a small school at Auburn, taught by a female, who receives \$24 per week for her services." Edward Smith of Monterey County said that the people at San Juan were very indifferent about the education of the 179 children who should be attending school. "Morality and society are in a desperate condition," he exhorted.

And Isaac Davis reported in one sentence: "There will probably be a school at Colusi [now Colusa] the coming summer."

Many of the reports to Superintendent Marvin referred to the absence of schools, including the report from J. Rogers of Sacramento. "This city has never spent a cent for elementary instruction. There have been three attempts to get up a school, which have failed after two or three months' trial," he said. And the responses from El Dorado, Klamath, Mariposa, and Shasta counties offered the same information as this report from John Lind in Calaveras County: "I regret that in this county there is nothing on which to report."

The bright spot in education in the state at the time was San Francisco, where approximately 1,000 children were attending classes. "We are pleased," the San Francisco report began, "at being able to give a few of the first results of the present Common School system of the city—a system which, under competent direction, is accomplishing for the cause of education here, all that was hoped."

This 1976 edition of *California Public Schools Selected Statistics* and all of its predecessors have been very instrumental in building cases for better public education. Mr. Marvin, for example, used the data he collected to convince the Legislature of his time that "... there is an obvious present necessity in our state for the introduction of some enlightened system of common school instruction." And like Mr. Marvin before us, we in the Department of Education have used the data collected in recent years to prove the value of every major reform effort with which we are now involved.

Ezra S. Carr, M.D., the seventh Superintendent of Public Instruction, wrote that, "Whoever would seek to amend or improve upon the public school system needs first of all to understand *what* has been done, and why...." And Dr. Carr gave the people of his day well-documented reports on public education in California in the 1870s.

I take pleasure in carrying on the tradition of the many outstanding superintendents who preceded me—individuals who have documented well the problems and accomplishments of public education in this state. Thus, I present to you this publication, which is a statistical record of what happened in the 1974-75 school year.

Wilson S. Carr

Superintendent of Public Instruction

Preface

This publication is concerned with the quantitative aspects of the public school system in California: that is, with the number of pupils, teachers, and schools and the amount of money needed to educate the 4.4 million children who attended California elementary schools and high schools in the 1974-75 school year. These quantitative data are very easily documented; many of the data have been reported periodically to the Department from the beginnings of the California public school system. The trends, diversities, and disparities that are evident in these statistics are prerequisites to the determination of educational policy at the state and local levels.

Historically, data on community colleges in California have been incorporated with data for elementary schools and high schools. This year, however, for the first time, much of the expenditure information for community colleges is presented in tables prepared by the Office of the Chancellor, California Community Colleges. This change has been caused by the development of separate and unique reporting systems at the community college level. Questions concerning data on the community colleges should be directed to that office.

Users of this publication should be aware that the 1973 edition of the *California School Accounting Manual* was implemented during the 1974-75 school year. The new manual completely revised the existing school accounting system: procedures and codes were established for the accounting of income and expenditures by object rather than by function as was the previous practice. The purpose of the revision was to provide flexibility in combining accounts to illuminate many different kinds of programs. Caution should be exercised when comparisons are made between the expenditure data reported in this publication and data in reports for prior years. The revisions to the Accounting Manual have made significant changes in the manner in which school district expenditures are reported.

Another development that the user of this publication should be aware of is that the portions of Senate Bill 90 and the companion Assembly Bill 1267 pertaining to the operation of elementary, high school, and unified school districts became effective for the first time in 1973-74. This legislation represented a major change in the traditional approach to school finance. The new law contains a general property tax rollback and revenue limits as well as mechanisms to lessen the disparities between high-wealth, low-tax school districts and low-wealth, high-tax school districts identified in *Serrano v. Priest*. The school support formulas developed in Senate Bill 90 and Assembly Bill 1267 resulted in a flow of most additional state funds for schools to low-wealth districts and the provision of the greatest property tax relief to those districts. Most high-wealth districts were, however, granted some relief from inflation. In many instances high-wealth districts had to increase district property taxes to maintain their expenditure levels. These school finance features could possibly bring California into substantial compliance with the Serrano decision in a decade or so. However, a recent court decision requires a more expeditious approach.

This publication is the result of the special efforts of Melvin W. Gipe, Robert G. Oliphant, and Richard Zeisler, all staff members in the Bureau of School Apportionments and Reports. However, without the aid of school administrators throughout the state and other units within the Department of Education, it would have been impossible to compile these data, which are so important in defining where we have been in public education, where we are, and where we hope to be.

Part I □ District and School Units

School Districts

Public education in California is organized administratively into the following categories: (1) the State Department of Education, which is empowered to exercise regulatory, leadership, and service functions to implement the state program of education; (2) the intermediate units; and (3) the school districts, the operation and control of which have been delegated to the people within broad limits established by the Legislature. The quality of the educational program is largely controlled at the local level by the school district governing board.

Through the years, experience has shown that the maintenance of an effective education program requires that school districts have (1) an adequate number of pupils; (2) a tax base that includes all of the resources of the community; (3) a coordinated educational program, kindergarten through grade twelve; and (4) inclusion of an entire community within the district.

In the 1974-75 school year, approximately two-thirds of the average daily attendance in California's public elementary and secondary schools was registered in 253 unified school districts. (Two new unified districts were established through elections and became operative on July 1, 1974.) The 795 individual elementary and high school districts served the remaining one-third of the students comprising the total state average daily attendance.

Schools

Few school districts can maintain a consistent pattern of grades in all of the elementary or secondary schools they operate because of obsolete buildings or population shifts within the districts. The predominant patterns for elementary schools are kindergarten through grade eight or through grade six. But these patterns may be modified into primary schools (kindergarten through grade three); middle schools (grades four through six); and intermediate

schools (grades seven and eight) or junior high schools (grades seven through nine). Typically, secondary schools are junior high schools and senior high schools (grades ten through twelve) or high schools having grades nine through twelve. Continuation high schools provide compulsory education programs for students sixteen and seventeen years of age who are required to attend for three hours a day unless employed. If employed, students may attend continuation high school classes for a minimum of four hours a week.

Child Nutrition Programs

National School Lunch Program. In 1974-75 approximately 6,140 public and private schools participated in the National School Lunch Program and served 1.4 million lunches daily. Slightly over 55 percent of the meals were served free or at a reduced price.

Special Milk Program. The Special Milk Program provides midmorning or midafternoon nourishment for kindergarten pupils and for pupils who bring lunches from home. In 1974-75 the milk provided amounted to more than 150 million half-pint equivalents in addition to the 285 million half-pint equivalents provided through the school lunch program.

School Breakfast Program. In 1974-75 the rapidly growing School Breakfast Program involved 1,088 schools that served almost 190,000 breakfasts daily to children in low-income areas. Free breakfasts were provided for those unable to pay even a nominal amount.

Federal support for child nutrition programs was very evident in 1974-75. The U.S. Department of Agriculture distributed to schools foods with a fair market value of \$27.5 million and charged \$2.0 million for such food. Federal cash reimbursements were increased from approximately \$84 million in 1973-74 to more than \$108 million in 1974-75.

Total	\$182,150,536

Part II □ Teachers and Pupils

Teachers

In the fall of 1974, approximately 187,450 full-time teachers were employed in the California public elementary schools and high schools. The number of reported teachers decreased 390 from the number reported in the fall of 1973. One-fourth of the elementary teachers and high school teachers were paid less than \$11,973, and one-fourth were paid more than \$16,470. The median salary of elementary teachers was \$13,817, and the median salary of high school teachers was \$15,059.

Full-Time-Equivalent Employees

In the fall of 1974, California school districts employed approximately 14,600 full-time-equivalent administrators, 13,600 full-time-equivalent pupil personnel services employees, 202,900 full-time-equivalent teachers, and 128,400 full-time-equivalent classified employees. These numbers translate into ratios of 7.1 administrative employees, 6.7 pupil services employees, and 63.3 classified employees per 100 teachers. (Full-time-equivalents include full-time, part-time, and prorated portions of employee time.)

Pupils—Public Schools

The total enrollment in public elementary schools and high schools in the fall of 1974 increased 27,940 from the fall of 1973; however, an enrollment increase of more than 59,800 in classes for adults masked the major decrease occurring in other enrollments. Enrollments in the elementary grades declined 1.4 percent, and enrollments in the high school grades increased 0.5 percent. A decline of 10.2 percent occurred in enrollments in special classes for the educable mentally retarded. This decline can be explained at least in part by the use of new procedures in establishing pupil eligibility for enrollment in such classes.

Pupils—Private Schools

Enrollments in private elementary and high schools in California increased 509 from spring, 1973. In the spring of 1974, a total of 412,344 pupils were enrolled in 2,495 nonpublic schools. Of this number, 334,230 (81 percent) were enrolled in church-affiliated private schools.

Class Size; Pupil-Teacher Ratios

In 1974-75 the average class size in grades one through three increased from the 1973-74 average of 27.0 to 27.2; the pupil-teacher ratio in grades four through eight decreased from 27.3 to 27.1. This pupil-teacher ratio is the lowest reported during the past six years.

Days of Instruction

A minimum of 175 days of instruction must be offered by school districts in California unless some unusual circumstance intervenes. In 1974-75 one district offered 180 or more days of instruction, and almost half of the districts operated at the minimum of 175 days.

Summer Schools

In 1974-75 more than 825,780 elementary school pupils attended summer school at least 200 minutes a day, five days a week, for four consecutive weeks. This attendance represented 31 percent of the state's fall enrollment in kindergarten through grade eight. Students representing about 39 percent of the state fall enrollment in grades nine through twelve attended summer school at least 240 minutes a day, five days a week, for six consecutive weeks. Typically, high school students enrolled in two subjects of their choice for the summer session.

Part III ☐ **Textbooks, Public School Revenues, Assessed Valuation, Revenue Limit and Bond Elections, and Tax Rates**

Textbooks

California is the only state in the United States that prints its own textbooks and provides them without cost to school districts operating kindergarten or grades one through eight. High school textbooks are purchased locally. The State Board of Education determines which elementary textbooks will be used and makes the required adoptions. However, in determining which textbooks it will adopt, the Board gives full consideration to the recommendations made by the Curriculum Development and Supplemental Materials Commission. Established by law in 1927, the commission is composed of outstanding educators appointed primarily by the State Board of Education but also by the Legislature and the Governor.

Originally, the state provided a single textbook in each subject for each grade; later, supplementary textbooks were added. Most recently, a variety of both basic and supplementary textbooks and been provided to accommodate pupils of varying abilities and social backgrounds. Special materials also have been provided to help teachers utilize the textbooks effectively.

Recent legislation authorizes the issue of instructional materials consisting of such items as films, tapes, flash cards, kits, phonograph records, graphs, charts, and multimedia systems in addition to the textbooks authorized by previous legislation. School districts were permitted to order such items for use in the 1974-75 school year and in following years. Tables III-1A through III-1C present data on textbooks.

Revenues

The three sources of revenue for public school support are characterized as "local," "state," and "federal." Property taxes provide most local revenues. State revenues are apportioned to school districts for general use and for categorical or specified use. In addition, state revenues are committed to teacher retirement benefits, liquidation of state school building aid bonds, and the purchase of elementary school textbooks. Federal revenues are largely directed to categorical use in support of specific programs (Table III-3) and may be transmitted directly to school districts or

indirectly through the State Department of Education or through offices of county superintendents of schools.

Assessed Valuation

The ability of a school district to provide local revenues can be measured by the amount of assessed valuation that exists for each unit of average daily attendance. California is moving toward uniform assessment among the 58 counties. So that more uniform assessments for public school purposes can be achieved, the assessed valuation in individual counties is modified by the "Collier factor," which takes into account the relationship of the county assessment level to the statewide average assessment level.

Some state revenues are apportioned to all school districts as "basic aid," and additional state revenues are apportioned to some districts as "equalization aid" to compensate for low assessed valuation per unit of average daily attendance. Table III-6 presents data on assessed valuation per unit of a.d.a. for the elementary school and the high school levels; these data are used for apportionment purposes. Tables III-7, III-8, and III-9 present the assessed valuation per unit of a.d.a. for unified, elementary, and high school districts to illustrate the disparities in assessed valuations among districts as highlighted in the *Serrano* case.

Revenue Limit Elections

A major feature of Senate Bill 90, which establishes a new school finance program for California public schools, is the imposition of annually computed revenue limits on the school districts. Thus, the general-purpose tax rate intended to produce the local portion of revenues supporting schools is controlled. School district governing boards must receive voter approval to increase the computed revenue limit. The ballot proposition presented to the voters for their approval must include the estimated increase in the general-purpose tax that would be caused by the proposed increase in the revenue limit. In 1974-75 a total of 269 elections were held in which voters were asked to approve increased revenue limits. A total of 101 (37.5 percent) were successful.

Bond and State Loan Elections

California is one of very few states that require more than a simple majority vote to incur long-term indebtedness. In a statewide referendum, however, California voters approved the use of a simple majority to approve state bonds and loans for the specific purpose of replacement or rehabilitation of school buildings that fail to meet earthquake safety standards. This special authorization expired in 1975.

The impact of the two-thirds requirement for regular bond elections is dramatically illustrated by the outcome of the 77 elections held in California school districts in 1974-75. Of the 77 issues voted upon, 26 percent were successful; under a simple majority requirement, 71 percent would have been successful. Of

the 12 bond elections held to replace unsafe school buildings, 50 percent were approved by the authorized simple majority vote.

Tax Rates

Senate Bill 90 eliminated a large number of the permissive tax rates available to school district governing boards to finance specific programs. Those levies associated with various recoupments, with employee benefits, or with special pupils were absorbed within the general purpose tax, and those levies associated with capital outlay or debt service were allowed to remain as permissive overrides. A given parcel of property may be subject to an assortment of elementary school, high school, and community college district taxes. Table III-20 presents various tax rates for individual school districts.

Table III-1 A

Number of Textbooks in State Adoption for Kindergarten Through Grade Eight in California Public Schools, by Selected Years

Year	Number of textbooks	Year	Number of textbooks

NOTES: Elections prior to 1973-74 were tax rate elections rather than revenue limit elections. Some tax elections were in sections, with different tax increase proposals in each. This table was prepared on the basis of the first tax rate schedule 3 to be in effect.
Elections for community college districts were omitted from this table.

NOTES: **Total tax rate** is the sum of rates levied against the assessed valuation of the district to provide local revenue to support the current operations of the district, to meet long-term debt obligations, and to finance certain programs or services initiated at the discretion of the district governing board.

General Purpose tax rate is the rate levied in conjunction with the district revenue limit plus the statewide tax levied, where appropriate, (in 1974-75 nine high school, ten unified, and 624 elementary districts were subject to statewide taxes.) Currently, the General Purpose tax rate of a school district is determined annually to provide local revenues sufficient to complement state apportionments in meeting the district revenue limit amount. However, the district governing board may choose to operate with a revenue limit lower than the authorized revenue limit and consequently will levy a General Purpose tax that is lower than that authorized.

Capital Outlay and/or Debt Service tax rate is the sum of district tax rates levied to liquidate long-term debt that includes the principle and interest of outstanding bonds and/or the principle and interest on state construction loans. Rates associated with the leasing of facilities and with earthquake safety correction measures also are included. All rates except those associated with earthquake safety correction measures and the Regional Occupational Centers or Programs result from voter approval. The latter rates are levied at the discretion of the local governing board within statutory maximum rates.

NOTE: Local governing boards may choose to make school buildings and playgrounds available for civic and recreational purposes or choose to provide breakfast and lunch free or at a reduced price for needy pupils. In either instance the attendant costs can be covered by revenues derived from a permissive override tax with statutory maximum rates. Local governing boards

may choose to operate Children's Centers or Development Centers for Handicapped Minors with the approval of the Superintendent of Public Instruction, and they may levy permissive override taxes for revenues to augment state aid and federal funds available to such programs.

¹ Tax rates are shown under the respective county of control.
² This is a joint district located in two or more counties; tax rates shown are for the portion of the district within the specified county.
³ This elementary district is included in two high school districts; tax rates shown are for the portion of the district within the specified high school district.

¹ Only a part of this district is in a community college district; tax rates shown are for the portion of the district within the specified community college district.
² This district is included in more than one community college district; tax rates shown are for the portion of the district within the specified community college district.
³ The tax rate shown is the community college or high school tuition tax levied by the county.

^a Tax rates are shown under the respective county of control.

^b This is a joint district located in two or more counties. Tax rates shown are for the portion of the district within the specified county.

^c This elementary district is included in two high school districts. Tax rates shown are for the portion of the district within the specified high school district.

^d Only a part of this district is in a community college district. Tax rates shown are for the portion of the district within the specified community college district.

^e This district is included in more than one community college district. Tax rates shown are for the portion of the district within the specified community college district.

^f The tax rate shown is the community college or high school tuition tax levied by the county.

Part IV □ Public School General Fund Expenditures

School district budgeting and accounting systems include a variety of funds, but the General Fund is common to all operating school districts. Additional funds maintained by some school districts include the Bond Interest and Redemption Fund, the Building Fund, the Special Reserve Fund, the State School Development Aid Fund, the Cafeteria Fund or Account, the Child Pupils Fund, the *California School Accounting Manual* provides for the uniform identification and classification of all expenditures of school districts and is consistent for the several funds.

This publication presents General Fund expenditures only. The State Controller's publication, *Annual Report of Financial Transactions Concerning School Districts in California*, includes income and expenditure data for all funds.

The 1973 edition of the *California School Accounting Manual* was implemented for the first time in the 1974-75 school year. It incorporates extensive revisions in the school accounting system. The previous practice for accounting of expenditures by function was overhauled in favor of accounting by object. The new approach allows greater flexibility because object accounts may be combined in any number of ways to illuminate many different kinds of programs.

The new manual provides for seven major General Fund object of expenditure classifications: (1) 1000—Certificated Salaries; (2)

2000—Classified Salaries; (3) 3000—Employee Benefits; (4) 4000—Books, Supplies, and Equipment Replacement; (5) 5000—Contracted Services and Other Operating Expenses; (6) 6000—Capital Outlay; and (7) 7000—Other Outgo. Each of these major classes has several subordinate classes.

The Total Current Expense of Education as amended by the 1973 manual is the sum of major object of expenditure classifications 1000 through 5000, excluding expenditures in each of the classifications for community services, food services, and facilities acquisition and construction. Food Services, Community Services, and Capital Outlay are not considered part of Total Current Expense of Education because of the variation of expenditure in these classes among school districts; however, such expenditures are added to the Total Current Expense to yield a Total Expenditure amount.

The tables in Part IV present dollar amounts for the several objects of expenditures, the amount per unit of average daily attendance, and the percent of Total Expenditures each amount represents. Tables IV-15A and IV-15B present similar and related data for individual school districts. Tables IV-9 through IV-13, added this year, illustrate the manner in which the new objects of expenditure may be combined to yield expenditures by program.

NOTES: "Current expense of education" includes expenditures of classes 1000 to 5000, inclusive, in the *California School Accounting Manual* (less Food Services, Community Services, and Facility Acquisition) beginning with the 1974-75 school year.

"Total expenditures" includes expenditures of classes 1000 to 6000, inclusive, in the *California School Accounting Manual*, beginning with 1974-75.

^aFigures for 1974-75 do not include community college districts.

See Table IV B.
